

Cheat Sheet for How to make Rim Protectors

Hello, I am RRRecardoe, and today we will make Rim Protectors

The sun's rays will damage the rim of your bucket, and the rim of the lids (with the centers cut out) will protect the rim or edge of your bucket.

Tools:

1. Jigsaw
2. Fine tooth jigsaw blade
3. Drill
4. Drill bit, large enough for the jigsaw blade to fit through the hole
5. Safety glasses
6. A bucket to set the lid on
7. Trash bag to place inside the bucket.
8. Broom and dustpan to clean up.

Items:

1. Bucket lid(s)

Instructions:

1. Place the trash bag inside the bucket, but edges hanging out.
2. Place the lid on the bucket with the trash bag.
3. Drill a hole in the lid.
4. Using the jigsaw, cut the center out of the lid.
5. Use a stick to remove the bits of plastic from the cutting.
6. Snap the Rim Protector onto the bucket.

You will only need to remove the rim protector to clean the bucket at the end of the plant cycle.
